Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character “16” has been used to designate both the substrate and electrically insulating layer of InP. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 2 and 4 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 2 and 4 repeat the limitation from Claim 1 to perform a deposition of an electrically insulating layer (22) until a thickness substantially equal to the thickness of the stack (12) is reached.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claim 1 recites the limitation "said stack" in Lines 5 and 8. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. In so far as definite, Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Shtengel (6,556,605) who teaches a process for manufacturing a laser comprising the operations:

Depositing layers to that will later be processed to form a stack (Col. 4, Lines 18-22; Fig. 8);

Depositing a masking layer of SiO₂ and patterning the masking layer by a photolithography process (Col. 4, Lines 31-37; Fig. 9);

Etching layers outside of the SiO₂ masking layer to form a stack (Col. 4, Lines 60-67; Fig. 10);

Depositing electrically insulating current blocking layers on the unmasked regions by MOCVD until a thickness substantially equal to the thickness of the stack is reached (Col. 5, Lines 8-12 and 44-52; Figs. 10 and 11);

Removing the masking layer (Col. 5, Lines 52-60; Fig. 13);

Depositing a conducting layer on the stack covering the upper surface (Col. 5, Lines 61-67; Col. 6, Lines 9-13; Figs. 14 and 15).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

5,214,662 to Irikawa

5,400,354 to Ludowise

5,610,096 to Yodoshi

5,912,475 to Itagaki

6,470,038 to Munakata

The aforementioned references teach various processes for forming III-V compound semiconductor laser with stack geometries.
